REACT - NEXT - TYPESCRIPT - PHP - LARAVEL - NODE - EXPRESS - MYSQL - SQLITE - VITEST - TAILWIND

I'm passionate about tackling complex challenges and approach every project with enthusiasm, always looking for the best way to solve them. I plan and design the full flow of features before implementing them, focusing on best practices and maintainable code. Responsible, organized, and committed to quality at every stage of the work.

PROFESSIONAL EXPERIENCE

ForIt Software Factory

Full Stack Developer

Buenos Aires, Argentina

August 2025 – Present

- **ULPÁN** — *PHP, Laravel 8, MySQL, JavaScript, Node.js* Feb 2026 – Present

Web application for the academic and administrative management of a language institute, with a centralized dashboard for Admin, Staff, and Student roles. Although PHP and Laravel were new technologies for me, my technical judgment allowed me to adapt quickly. I joined the team at an advanced stage, contributing to enrollment logic, level assessment through exams, and role and permission management within an established MVC architecture. I also played a key role in client communication: I received their queries, classified them as bugs, refactors, or new features, and reported them to my leads.

- **LA LIGA** — *TypeScript, React.js, Node.js, Express, SQLite, Prisma, TailwindCSS* Feb 2026 – Present

Web application for managing a football school — institutions, matches, and fixture generation — with a complementary mobile app. I worked under Clean Architecture and Functional Programming principles in a monorepo with yarn workspaces. I refactored an entity to be reused across multiple tables, reducing redundancy in the database, and participated in testing on iOS devices.

- **AMIA** — *TypeScript, React.js, Node.js, Express, SQLite, TypeORM, TailwindCSS* Ago 2025 – Feb 2026

Multi-tenant recruiting platform built on a microservices architecture. I joined as a trainee and progressively took on greater responsibilities: I developed use cases with their corresponding tests, created entities, and worked with database migrations. I implemented a GET method within an RPC Client system to optimize internal service communication, and closed 6 sprints by resolving the team's pending tasks.

EDUCATION

University Technical Degree in Computer Science

Universidad Nacional de General Sarmiento

Buenos Aires, Argentina

March 2024 - Present

Full Stack Web Developer

Digital House + FORMAR

Buenos Aires, Argentina

September 2024 - May 2025

Advanced Full Stack Web Developer

ForIt

Buenos Aires, Argentina

May 2025 - August 2025
